SUMMARY

AI Engineer with **2+ years** shipping production back-end systems and a year as a **founding engineer**. Builds **LLM agent workflows with guardrails** for decisions that carry **dollar costs**: an agentic triage layer that auto-resolved **76% of checkout-integrity alerts**, plus work on **accounts-payable automation**. Strong in **data modeling** and latency.

EDUCATION

New York University **September 2025 - May 2027**
Master of Science, Computer Science *New York City, USA*
Coursework: Generative AI (**LoRA fine-tuning** of Qwen2.5-0.5B on Dolly-15k), Big Data, Algorithms

National Institute of Technology, Tiruchirappalli **August 2019 - May 2022**
Master of Computer Applications *India*

Banaras Hindu University **August 2015 - May 2018**
Bachelor of Science (Hons.), Computer Science *India*

TECHNICAL SKILLS

LLM Systems: Agent Workflows (LangGraph), Guardrails, Claude API, Gemini API, LoRA Fine-Tuning, PyTorch
Languages: Python, TypeScript (React), JavaScript (Node.js), Java, SQL; Data Structures & Algorithms
Data & Distributed Systems: Kafka, Spark, Delta Lake, SAP HANA Cloud, PostgreSQL (pgvector), SQL Server
Backend & Cloud: REST/OData APIs, FastAPI, Microservices, AWS (S3, Glue, Athena, RDS), SAP BTP, Docker, CI/CD

EXPERIENCE

MSITEK
AI Engineer Intern *Princeton, New Jersey* · **June 2026 - August 2026**

- Built an **agentic LLM triage layer** (Anthropic Claude) with **guardrails** on a retail alert pipeline, auto-resolving **76% of checkout-integrity alerts (367/482)** and surfacing **EUR 7.3K+** in value.
- Designed **SMart Retail AI**, a greenfield platform on SAP BTP: **CDS data models** on **SAP HANA Cloud** behind **OData V4/REST** microservices (Node.js), powering **8 AI engines** on real POS data from SAP's Walldorf campus store.
- Built a **Node.js ingestion service** loading POS and ERP data into HANA Cloud (**120K+ records**), and benchmarked a ridge-regression forecaster against the baseline model.
- Researched SAP DRC-to-BTP integration for an **accounts-payable invoice automation** program (intake, **three-way match**, duplicate checks, S/4HANA posting) for a European food manufacturer.
- Owned the platform **end to end**: **68/68** unit and integration tests passing, production deployment, architecture docs, and knowledge transfer; **approved by SAP for the SAP Store**.

Flow Energy (theflowenergy.com)
Founding Engineer *India* · **2024 - 2025**

- Built the company's web platform **from zero** as its first engineer: a React + TypeScript + Vite product catalog with a **typed data model** spanning 6 industrial equipment categories, deployed on Vercel.
- Shipped a **Gemini-powered assistant** that keeps full chat history for in-context follow-ups, with model calls isolated in a **service layer** so the provider can be swapped.

Fastenal
Software Development Engineer *Bangalore, India* · **July 2022 - March 2024**

- Designed, developed, and deployed **RESTful APIs** and third-party integrations serving **high-volume production traffic** at **99.9% uptime**, enabling real-time data exchange and boosting customer engagement by **30%**.
- **Profiled latency and throughput** of production services with Dynatrace and Kibana and **tuned SQL Server queries** to remove bottlenecks, resolving production incidents through **root-cause analysis**.
- Built **CI/CD pipelines** with Jenkins, Docker, and TeamCity, cutting deployment failures **35%**; earlier, as an intern, cut Node.js microservice latency **40%**.

PROJECTS

Brain-Controlled Wheelchair: Real-Time EEG Classification with Agents **February 2026 - April 2026**

- Built an **event-driven pipeline** piping EEG via **Kafka** into **Spark** and **Delta Lake**, run by **LangGraph agents**.
- Served a **PyTorch** EEGNet + ShallowConvNet ensemble (**88.1%** accuracy, 153 subjects) as live wheelchair commands.

ACHIEVEMENTS

- Invited **guest speaker** at Softrec NITT AGM '26, NIT Trichy; **All India Rank 76**, NIMCET 2019.
